PRODUCT SPECIFICATIONS

Aviox Cybershape Carbon Pro

Code: 32299

MRP : 15800.00

With the unique, hexagonal Cybershape design, you get a significantly larger sweet spot than in traditional rackets. The Cybershape form factor also delivers a larger, optimized hitting surface located higher on the racket head. The generous surface is made from T700 carbon fibre, with an attractive frosted finish. The combination of the thicker Honeycomb Polymer core and a total racket thickness of 16mm makes this racket more forgiving than thinner rackets. The Aviox Cybershape Carbon Pro also provides enhanced control and makes it easier to bring down the game tempo in the tougher reset shots at the net (dink shots) and also in drop shots at the baseline. The even balance and total weight of this racket make it very reactive and perfect for net play. Since the Aviox Cybershape Carbon Pro is USAPA-approved, you can also use it in competition.
