COSCO (INDIA) LIMITED

COSCO (India) Limited is India's leading Sports, Fitness and Lifestyle brand. It was established in 1980 and got listed on the Bombay Stock Exchange (BSE) in 1994 as a public company.

We at COSCO believe in providing premium quality products backed up by efficient after sales service. We have a state of the art production facility in Gurugram, spread across 3,50,000 sq.ft. with a motivated and efficient team of over 650+ personnel covering Production, Sales, Management and Service. We have qualified Technologists and Engineers to manage production and spearhead R&D.

We also represent many International Sports and Fitness brands in India which we distribute through our strong network of over 800+ dealers pan India fed by our branch offices in Delhi, Mumbai, Jalandhar and Gurugram.

We have established a strong legacy over 4 decades with innumerable achievements, strong associations, International Approvals and National & State level affiliations. We further aim to strengthen our commitment of giving back to the community and take pride in being socially inclined with focused and effective CSR projects.

HOW TO SELECT A TENNIS RACKET?

HEADSIZE

OVERSIZE	MIDPLUS	MID
106-115 in	95-105 in	85-94 in

HEAD BALANCE

HEAVY	LIGHT
Increases stability and momentum in lighter frames.	Adds maneuverability in heavier frames.

BEAM WIDTH

The wider the beam the more power the frame produces. The thinner beam, the more control.

28mm	23-27mm	22mm
------	---------	------

STRING GAUGE

WEAKEST	STRONGEST
18 Gauge (Thinnest)	15 Gauge (Thickest)

GRIP SIZE

- Hold your playing hand flat, palm side up
- Record the distance from the middle of your palm, up to the top of your ring finger. Choose a grip size closest to your measurement. Adult grip sizes are between 4 1/8" and 4 5/8". Junior grip sizes are usually between 3" and 4 1/8".
- If you are in between these grip sizes choose the smaller grip. Overgrips usually add 1/16".

BUILT-IN SPEED GLUE EFFECT To achieve maximum power

TRANSTENSION SPONGE Thanks to the TransTension Sponge and the exciting material, we have found a formula that will revolutionize and generate maximum tension and sponge power.

POWER SPONGE CELLS

POWER SPONGE Cells deliver maximum catapult effect and optimal power. It generates a longer ball trajectory and a more aggressive arc during loop play. The sponge pores uniquely enhance the contact between the rubber and the blade, giving each stroke a satisfyingly crisp sound.

H-TOUCH SENSOR

H-TOUCH SENSOR technology provides a unique rubber with a sponge hardness of 50 degrees.

OCS: The brand new Oxygen Capsule System is our most advanced rubber technology, specially adapted to the new poly ball. The OCS-sponge generates a very high amount of catapult effect thanks to the precisely measured size of the air pockets. This technology is developed to generate the maximum amount of speed and spin possible.

LIGHT WEIGHT

LIGHTWEIGHT in comparison to other rubbers on the market. It's also very lightweight and therefore easy to play

TENSION RUBBER

TENSION RUBBER stands for a truly modern table tennis rubber characterized with a lots of feel, spin variations and intense dynamics.

POLY BALL OPTIMIZED

POLY BALL Optimized Stiga Rubber

THE CR SYSTEM (Combi Revolution) is when front part of the blade is UV finished, which yields a reasonably increased speed to the ball. A CR system blade is at least 21% faster than a conventional one.

THE WRB SYSTEM accelerates the blade face for faster returns, more power and extra sensitivity of touch.

THE ACS-TECHNOLOGY allows very high speed to be combined with max springiness/elasticity in an ultralight rubber with outstanding control.

MEGA TENSION creates more tension without increasing the weight of the rubber, causing quicker rubber recovery

NCT-NANO COMPOSITE TECHNOLOGY embodies a new technique with extremely small grains that produce stronger and tighter bonds to produce greater dynamic effect.

THE CRYSTAL TECHNOLOGY increase your speed. Normal blade treatments use regular lacquer, but Crystal Technology employs a transparent hydrophilic gel lacquer that STIGA specially developed.

THE DIAMOND TOUCH TECHNOLOGY gives the outer veneers extra hardness and the surface an incredibly smooth finish.

TOUCH CARBON TECHNOLOGY for increased Sweet Spot and Power.

LIGHT Balsa WEIGHT

BALSA Reduce weight

CCF (CLOSE CORE FIBRE) TECHNOLOGY which means that the carbon layer sits directly on top of the wood core. The result is more control and speed in your game.
